

SHORELINE STABILIZATION EXPERIENCE

Woodstock Cove Shoreline Stabilization, City of Virginia Beach Parks and Recreation

Kerr Environmental Services analyzed various shoreline stabilization alternatives, permitting options, and design services related to stabilization of 700 feet of shoreline at Woodstock Cove Park that supports an access driveway servicing pedestrians and light-duty truck access. This investigation resulted in a report containing a Conditions Assessment, Alternatives Analysis, Construction Cost

Estimates, Prioritized Recommendations, and Evaluation of Environmental Permitting Needs. Following the selection of the Preferred Alternative by the City, design drawings will be prepared in an effort to stabilize the shoreline, reduce erosion, and also help achieve Chesapeake Bay Total Maximum Daily Load Requirements.
